Prof. Matsumoto chats about law for information society

I am Shunsuke Matsumoto from Information and Media Studies at Sagami Women's University. The subjects I teach are about the connections of media and social rules. I focus on learning about laws for information society, especially discovering legal problems and legal problem-solving. Media students can study Media Environment Theory I-III, Information Management Theory, and Information Environment Theory, but the basic rules all come from the university-wide course, Japanese Constitutional Law. In modern civil society, individuals' rights and freedoms are recognized, but our environment has changed since they were established. In particular, in our society experiencing the Information Revolution, it is difficult to distinguish what rules should remain and what new rules are needed. My demonstration class for Open Campus is "Fearful Stories about Personal Information." Personal information is important, but if we are not careful, it can be misused in our information society. Please come and experience this class, where we will look at some actual case studies.

Learn with pro teachers!

Only Media has these interesting classes!!

In Media and Information classes, we get practical experience using various equipment and software. If you learn techniques, you can express various things!

< Applied DTP >

Actually working with cameras, we can understand how to use cameras, grasp their technology and software, and learn about photo taking techniques!

< Sound Design >

We can learn about making background music, recording narration, and editing sound effects!

< Video Production >

This is the class where we learn about shooting on location, how to use a video camera and handling technological innovations!

Hurry! Hurry! Step on up!

Media Girl activities at Aioi festival.

Our school festival was held November 3 and 4.

Check out PROJECT KINOKO, Hara's Seminar, Sagajo.com, & Kids Book Project, from Information and Media Studies.

Animation "Night on the Galactic Railroad"

Video starring Sagappa Joe.

English and Media Girls making mini picture books.

Sagajo.com booth.

Programing? CG?

Professor Sato, Please teach us!

Professor Sato's talk on Programing and CG.

1. What subjects do you teach?

Basic Programming, Computer Graphics I, Animation, and other subjects.

2. When you teach, do you have a special technique?

I try to give familiar examples when I explain difficult things.

3. I think programming and make CG is hard. Do you have a point for learning?

You should think about why you need a certain line or a certain order in your program, without just swallowing an example program as it is.

4. Where do you make use of programming and CG techniques?

If you know about programming, you can find glitches with devices and applications. Also you can make goods which you design with a 3D printer.

5. After mastering programming, what do students do in your Graduation Seminar?

Students create something that they are interested in themselves.

For example websites, games, animations, and so on.

6. Please give a message for students who are not enrolled at this university.

SWU Media students are not only creating but also learning many things.

If you interested in SWU, please experience our Open Campus.

With skills
come possibilities!

Have a look??

Media Pages

We made "Media Pages1-6" for high school students. Please look into the making of Media Pages!

Setting purpose and layout.

We decide what to write.

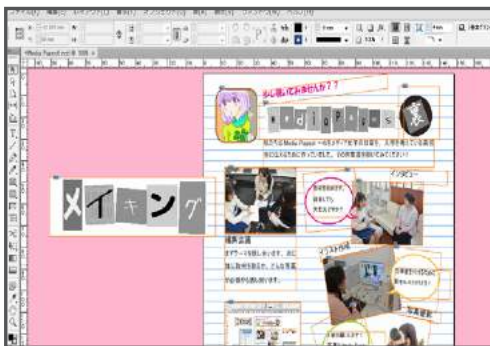

Following the purpose, we talk about layout and design.

Interviewing!

Illustrating

Editing session

Using InDesign, we layout text and images, making a fun and easy to read design.

Taking photos

Print and finish!

We hand this out to high school students who come to Open Campus!

Comment

We made this free paper, Media Pages, in Rives Seminar. Through this production, we learned ways to use DTP software. We also could communicate with various people. We appreciate all our readers and contributors. Thank you everyone!!
